## Update or reinstall Safari for your computer

For Mac computers, the Safari web browser is installed and updated as part of macOS. For PCs, Safari updates are no longer available.

### Safari for Mac

Safari is included with your Mac operating system.

#### Updating Safari

To keep Safari up to date for the version of macOS you're using, use the App Store to [install the latest macOS updates](#).

The [most recent version of macOS](#) includes the most recent version of Safari. For some earlier versions of macOS, Safari might also be available separately from the Updates tab of the App Store.

#### Reinstalling Safari

If you deleted Safari and don't have a [Time Machine backup](#) or other backup, [reinstall macOS](#) to put Safari back in your Applications folder. Reinstalling macOS doesn't remove data from your computer.

Before reinstalling, you might want to use [Spotlight](#) to search for Safari on your Mac. If you find it, but it's no longer in your Dock, just drag it to the Dock to add it back.

### Safari for Windows

Apple no longer offers Safari updates for Windows. Safari 5.1.7 for Windows was the last version made for Windows, and it is now outdated.
